AutoLISP has been discontinued and replaced by VBA. VBA is no longer supported by AutoCAD Crack Mac; AutoCAD's ObjectARX API is preferred. ObjectARX AutoCAD's ObjectARX is an object-oriented programming language for AutoCAD, developed by the company which produces AutoCAD. ObjectARX is known to be compatible with the Microsoft Windows operating system. The ObjectARX language supports a strict object-oriented programming paradigm. This includes the automatic garbage collection, which is accomplished through the use of a so-called "super class." AutoCAD's ObjectARX API is based on the object-oriented programming paradigm called "Object-oriented programming in C++" (OOP in C++). However, it does not support multiple inheritance. ObjectARX supports the following features: Class inheritance Class interface Class variables Class methods Class methods (duplicate methods) Class constructors Class destructors Class relationships (inheritance) Inheritance of private variables Inheritance of private methods Protected methods Static methods The class interface of an object reflects the structure of that object, allowing the developer to organize the class into modules. ObjectARX supports the automatic garbage collection, which is accomplished through the use of the "super class" called OCLASS (ObjectARX Super Class). ObjectARX provides its own runtime environment, which is an object-oriented scripting environment that allows you to create your own functions, and object models, that can interact with each other. The ObjectARX language is also based on the OOP principles.
