Whether you use it at the office or on the job, it is the best choice for you. Use AutoCAD to: * Sketch and design from scratch or enhance designs with powerful tools * Plan and make 3D models and animations of buildings, bridges, roads, and more * Produce 2D drawings, including 2D Floor Plans, schedules, floor plans, shop drawings, structural diagrams, wiring diagrams, and blueprints * Draft and annotate 2D drawings, including floor plans, plans, elevations, cuts, details, elevations, section and profile views, shop drawings, structural drawings, and blueprints * Create custom publications for business purposes, including brochures, posters, newsletters, catalogs, and more * Design web pages and websites * Prepare AutoCAD drawings for architectural, engineering, and construction projects, including mechanical, electrical, plumbing, fire protection, and much more. The 2018 version is full of new features and is being updated all the time, and we've added a new app for mobile devices and new features for cloud sharing. With everything AutoCAD can do, you'll never be stuck for an idea again. To help you stay organized, and get the most out of your work, we added a brand new drawing template called Plan of Action. You can start and save your work in Plan of Action, and choose from over 200 actions to complete your project. Actions include hanging letters, mounting text, creating forms, adding shapes, adding lines, and more. You can also use the Template Advisor to customize your own Plan of Action template. AutoCAD is available at a low monthly subscription rate. Starting in June 2018, we're offering a new subscription option. AutoCAD + AutoCAD Mobile + eDrawings + eBusiness is \$50 a month, \$2 less than the previous subscription option of AutoCAD + AutoCAD Mobile + eDrawings + ePlan of Action. In addition to AutoCAD, it includes the entire Autodesk eDRAW family, along with eBusiness, the new graphical content platform." From reviews on BestBuy.com: "We would buy AutoCAD again even if it was \$50 a month with a yearly subscription. It has become the standard for drafting and design, and it is easy to use and affordable."

Architecture AutoCAD Architecture is a CAD package for architecture and construction professionals. It is sold directly by Autodesk and was created by Autodesk to address the lack of available CAD packages that would meet the needs of architects and construction professionals. Initially released in 2007 as AutoCAD Architecture 3D, the package was subsequently upgraded to AutoCAD Architecture 2010 on January 23, 2010. It is created using a new, user-friendly interface and improved features to aid architects in creating detailed architectural designs. It includes a visual design of buildings, an integrated floor plan and 2D and 3D layouts. AutoCAD Architecture includes a full suite of professional tools for creating and editing 2D and 3D plans, construction drawings and 3D model designs. It also includes powerful tools for generating plans, sections, elevations, and elevations. The plans and sections can be annotated and linked. Section properties can be set so that they display clearly when viewing a plan. Plans and sections can be edited from a traditional paper-based drawing, imported from other CAD systems, and exported to other formats such as PDF, JPG or EMF. AutoCAD Architecture includes integrated tools for working with both 2D and 3D designs. Design editors enable architects to draw, move, rotate, scale, and edit both 2D and 3D building components.

The 3D view also allows architects to view drawings and components from different viewing angles and select a component to view it from an alternate perspective. The 3D view is also used to model a building's façade. It supports multi-application design collaboration, enabling architects to design using several tools and projects in one single drawing session. It also allows users to share their 3D designs using a cloud-based storage and collaboration platform. Awards AutoCAD Architecture has been awarded Best Products of the Year for CAD in 2009, 2010 and 2011, and Best of the Best in 2010 and 2011. AutoCAD Architecture won the Industry Innovation Award at the Autodesk Partner Conference in 2009, 2010 and 2011. AutoCAD Architecture 2010 was awarded Best CAD Application at the Make conference in 2010. AutoCAD Architecture 2010 was awarded Best Product at the IEEE Computer Society Computer Engineering Technical Conference in 2010. In 2010, AutoCAD Architecture won the Best Software of the Year award at the Singapore Computer Society Conference. AutoCAD Architecture 2010 was awarded Best CAD Application at the Japanese CAD Users a1d647c40b

After you have registered you will receive a e-mail with a link to activate your license key. After activation you have the same rights to Autocad as any registered user. I have a Microsoft license key, so I have no way of creating one on my own. The only way I found is to download Autocad, and create a license key for myself. I understand that it is not very professional and that I have to change the license key every time I install a new version of Autocad. But I don't have an alternative. Q: How to delete an object from a list I have a list of CustomObjects, List. If a particular item is removed from this list, how can I remove it from the list that I am working with. I am working with more than 10,000 objects in the list. What is the best way to do this? The CustomObject is just a wrapper of data from the database. If I could convert it to be a set, then I could do this. Can this be done in Java 8? Business reports are increasingly important to many companies. With Markup Assistant, you can create automatic reports on your own data, saving hours of time. It's easy to use, and the reports are automatically exported into a popular industry standard format, the DXF (.DWG) file. "We've saved hours of time," said Ron-Paul Vermeulen, CAD Programmer at Anfora Inc., the world's first company to use AutoCAD as a core software. "With Markup Assist, we can get feedback immediately from the user's digital tablet, then revise the drawing, and send it back to the user in minutes." The Markup Assist feature was introduced with AutoCAD in 2015, but the focus of development was on its new DXF support. This year, the feature was refined to make it easier for users to mark up existing drawings, and for users to create reports of their own data. Users can import a text file of their data, automatically identify their key points, and add comments. AutoCAD displays the comments on the same drawing that users mark up, and makes it easy for them to add to or delete from the drawing. If the user doesn't provide comments, AutoCAD makes them automatically. You can also mark up new drawings with comments and send the comments along with drawings to the print shop. Among Markup Assist's key features are:

- The ability to import text from a PDF file. You can also import text from an image file.
- The ability to mark up existing drawings.
- The ability to mark up new drawings.
- The ability to send the comments along with the drawings to the print shop.
- Ability to edit or delete comments when the drawing is printed.
- Ability to have comments appear on the same drawing.

Other changes:

- Ability to move/copy/delete the annotation for the annotation feature in the Properties Palette, rather than in the Annotate tab.
- Ability to merge the drawing window and annotation window together.
- Ability to paste the drawing from the clipboard to the drawing window.
- Ability to apply the current annotation to a group of drawings.
- Ability to define colors for your annotations.
- New text editor that works with the drawing
