The MXF Format As the name suggests, MXF (Material Exchange Format) is the 'Open XML Media Format'. It is open source software. According to the specification, this format is the ideal solution for the interchange of digital media content. MXF is an XML-based file format that is supported by most Adobe Digital-Content products. As such, the format can be used to represent and exchange digital assets including images, video, audio, and video clips. Also, you are allowed to use MXF files interchangeably with the popular Adobe Director, Lightroom and Photoshop formats for both editing and viewing media. MXF files, on the other hand, can be viewed using popular video viewing software and equipment. The MXF Standard is based on the TM-30. To be more exact, it is based on the Media Interchange Format for document image
