Vagus nerve stimulation (VNS) is an investigational therapy currently being evaluated for treatment-resistant major depression. The exact mechanism of its action is unknown. It has been suggested that it is an antidepressant and perhaps may also improve obsessive-compulsive behavior. It has been found to be a safe and effective treatment in phase 2 clinical trials.

This case study is intended to further understand the basis for the therapeutic effect. As such, the aims of this case report are to describe the history of a patient with major depressive disorder who underwent VNS and to examine
