What's new:

, known as Ninja Mojo Slammers in North America, is an overhead arcade fighting game developed and published by Namco in 1991. An updated version, called Ninja Master, was released in 1992, later re-released as Ninja Master 2 in 1994. After the release of Mobile Ninja Snail Game, Namco reused the title for their arcade game, Super Nova Snail Game, released in 2009. The game was very successful in Japan, scoring more than 2 million players. Gameplay Ninja Smasher is an overhead fighting game that uses a three-dimensional grid-based stage (unlike Ninja Fighters), along with a selection of both new fighters and unlockable fighters from Bandai's Star Force anime. Four playable characters are available. There are four stages in the game, and the player is always shown as the player character, Kinu and his next opponent using both a determination screen and an on-screen display (ODD), in between rounds. The three opponent characters are controlled by the player's two buttons to the left, right and top, respectively. The player character can jump, but due to a lack of a third dimension, he cannot jump high. Four buttons are used to perform special moves for each fighter. For each button, one of three special moves are available, (identified by bone-like symbols on the character's uniform) and three are used. In addition to the supers (some of the moves in the game are named by their effects), these perform differently depending on the fighter's gender. For example, in the Super Young Black Bone (which is exclusive to Ryu), the player can block or let the opponent hit him, and when blocked, grab him and pull him towards his character's opponent with the force in the reverse direction. A super is performed when pressing the A button twice in succession, or the B button for one move and the C button for the other. In the first stage of the game, above 9999 gas points, the player's character loses health, and the clock resets to 00:00. In this first stage, the player can choose between four characters and four stages, with stages randomised. A four-player variant was released in Japan, with two player characters instead of four, and with special bosses. The game has an 8-player variation, where the player has choice of three characters. The player can play with a friend (2 Player Game), a CPU-controlled opponent (2
