Key AutoCAD Features The features that have made AutoCAD a standard for the drawing industry include the

ability to create a complete 2D, 3D, and engineering design drawing from a 2D image in under a minute; the fast, easy, and intuitive drawing and editing

tools that allow you to see your drawing instantly; and advanced, precise, and powerful technical drawing capabilities that provide information

for technical drafting, mechanical engineering, electrical engineering, plumbing, and architecture. AutoCAD uses a

proprietary file format and support for drawing and DWG file types that allows it to be opened by many third-party applications and to integrate with other

products, such as AutoCAD LT, AutoCAD Architecture, Inventor, Creo, SolidWorks, 3ds Max, Maya, Adobe, and Google Earth. The

availability of AutoCAD for free download on the Internet is just one more feature that makes it the most popular choice among architectural

and engineering firms. There are many other features and the full scope of AutoCAD capabilities are not listed here; these, along with full product information,

are available on the AutoCAD home page (or through the Autodesk website. Product Name: AutoCAD AutoCAD Home Page: AutoCAD Price: From Free to

design automation software for LinuxBEIJING/SHANGHAI (Reuters) - The French train company SNCF said on Wednesday it has scrapped plans to

build a new high-speed train line that would have ferried passengers between China's booming cities of Beijing and Shanghai. A new high-speed train station

being built in the coastal Chinese city of Hangzhou, Zhejiang province, is seen in this April 19, 2012 photo. REUTERS/Stringer/File Photo The SNCF made the

decision after an investigation into the project, said Donghua Wang, deputy director of SNCF's research center. "We investigated all the potentials, the

technical feasibility and also found out that we were not the only company that intended to build such a line," Wang said. SNCF said it would instead invest

in services for the existing bullet train line that runs between Beijing and Shanghai and said it would reconsider its investment plans in China in the future.

SNCF, which is owned by state-run railway company CRRC, initially planned to start construction on the $6.6 billion project in 2013. The operator said its

decision came after it concluded that other Chinese firms with similar plans to build high-speed railways, including China Railway International Corp (CRC) and state-

owned China Communications Construction Group Co Ltd, could meet ca3bfb1094
