## What's New in the AutoCAD?

When you have approved a drawing, you can save it to a .cad file that includes only the changes you've made, so that others can use it without all the markup. Markup Assist: Save time and paper by reviewing and approving existing markup while you're making changes to the drawing. Automatically apply feedback to the drawing without leaving the screen or any changes you've made. (video: 1:35 min.) You can annotate your drawing with custom comments, arrows, and other shapes, and you can track revisions for a particular shape. You can also review a drawing's history to see who made changes to the drawing and when they made those changes. Sketch: Sketch has a completely new way of displaying drawings. Sketch automatically displays tools when you press and hold any tool-tip button. Sketch also automatically shows the properties of objects, which makes it easy to see the overall size of an object, the number of parts, and its location on the page. When you're using a tool to draw or modify the object, you can see the stroke and fill colors, the transparency, and the size of each of the sketch lines that make up the object. Sketch automatically updates as you modify the object, so that you can easily see the changes you've made. When you work in Sketch, you see your current settings as a bar graph. So you can see at a glance how much time you've spent on a particular feature, and you can see how your current settings affect the sketch. New collaboration tools make working with collaborators on the same drawing even easier. Now you can discuss a drawing in a new way: Group your chat conversations with others into an Inbox Review files and comments together as you collaborate Work in separate views so you can see the whole drawing at once View your projects on your mobile device Link your accounts to work together and get updates in real time Sync to your favorite cloud storage so you can access your files from any device Get notified with alerts As you work on a drawing, you'll see the number of people who have asked for a review. New Drawings: Create and send your own standard drawings Use a template or layouts to quickly create drawings Share designs as paper prototypes or PDFs
