Starting with Photoshop CS2, Photoshop no longer requires that you buy a copy of Adobe Creative Suite. With only Photoshop and Photoshop Elements installed on your computer, you can handle many of the basic image editing tasks. Over the years, Photoshop has grown from its first release in 1987 as a tool for designing greeting cards to an industry-leading suite of graphics tools that can be used for commercial, professional, educational, and even hobbyist applications. Unlike Photoshop Elements, Photoshop continues to receive regular upgrades. Releases are no longer at the whims of Adobe, but are instead released at a pace that satisfies the needs of the professional and hobbyist. This Photoshop tutorial will show how to make a grunge effect, or texture, to a photo. We will make a grunge effect over a building with Photoshop. The steps are as follows: Step 1 - Importing the photo First of all, we need to import an image file in Photoshop. You can either use any photo you want, however make sure that you have enough RAM (Random Access Memory) available. Photoshop uses a lot of RAM when you try to process a photo. Go to File --> Open, browse to locate the image, select it, and click Open to import the image. Step 2 - Extracting image and working in black and white Import the image into a new Photoshop document and then go to Select --> Same Shape and hit OK. Fill the shape with a black color using the "Foreground and background" color. Click with your mouse on the fill button to select a color for the foreground. Step 3 - Adding grain texture Open the file in Photoshop and go to Filter --> Blur --> Gaussian blur. Keep the width at 2 and the blur amount at 500. Change the distribution from normal to central pixel. Click with your mouse in the middle of the filter box and drag your mouse slightly up to blur the contents of the filter. Step 4 - Adding a grunge effect Go to Filter --> Render --> Cloud Filter. Change the strength of the effect to 30, and then click OK. Go back to Filter --> Distort --> Edge Band. Change the width to 17, height to 12, and the threshold to 0. Select the white color in Photoshop and go to Edit --> Fill. Set the mode to Color and the blending

Q: Example of named route not resolving? I have been playing around with the django-environ project to see what I can do with it. It has a wiki page here that is really great, and looking at the source shows how powerful it is. I have a template that is rendering one of the pages in the application, and one of the errors that I have is one of the static templates in the website. So I'm wondering if I've found a bug or am doing something wrong. When I open that page in my browser and make a request for that page I get an url.py error, as if the app didn't have any url mapping for that page, so I'm wondering why this doesn't resolve. Here are my URLs.py file for that view: from django.conf.urls import url from django.conf.urls.static import static from django.contrib import admin admin.autodiscover() urlpatterns = [url(r'^$',views.site_home,name='site_home'), url(r'^admin/', admin.site.urls, name='admin'), url(r'^environ/', include('environ.urls')), url(r'^', include('site.urls')),] urlpatterns += static(settings.MEDIA_URL, document_root=settings.MEDIA_ROOT) urlpatterns += [url(r'^'.environ.bookmarklets.url(r'^$',redirect_to_bookmarklet), name='bookmarklet-redirect'), url(r'^'.environ.bookmarklets.url(r'^/(.*)',redirect_to_bookmarklet), name='bookmarklet-redirect_pattern'),] Here are my views.py file: from django.conf.urls import url from django.contrib import admin from django.conf.urls.static import static from django.contrib.staticfiles.views import serve admin.autodiscover() from

Q: How to update UI label in asynch or single threaded way? In my code I retrieve data from the web via async network request. User input data and click the button to execute the request. The result is displayed in the UI via the UIAlertController. The problem is that the UI is not updated every time and user have to wait for the result. I tried using the method: func updateUI() { let mainStoryboard: UIStoryboard = UIStoryboard(name: "Main", bundle: nil) let vc = mainStoryboard.instantiateViewController(withIdentifier: "AlertController") as! AlertController vc.alertTitle = "Title" vc.alertMessage = "Message" self.present(vc, animated: true, completion: nil) } with no result: A: You don't want to block the main thread waiting for the network request to return. What you need to do is call the method when the request completes, not while it is still going on. You are trying to make the UI update before a network request completes but you don't want to do that. Read this on how Async and Await are different than what you might think they are. Q: Table to map two columns of different data types in Postgresql Consider the following table CREATE TABLE testtable (Id bigint NOT NULL ,Email bigint NOT NULL) Imagine Email is a particular column's data type. Now I want to map every email to an ID but this is not possible in Postgres. Is there any solution where I can achieve the desired result? I did not want to use a Django-Model because I am using it only for querying. A: You can use a VIEW to concatenate the two columns: CREATE OR REPLACE VIEW testtable_view AS SELECT id, email::text || email_id FROM table; You will have to use a trigger on
