I want to compare one of my current RAM models with one of those offered by AnandTech a few years ago to see what I can learn about how well the developers have improved the technology since. TrinityCore on the I7-975 @1.2GHz @ 1.333V stutters hard, however it is one of the easiest games to stutter in. I think overclocking will make a big difference for this game if you have enough RAM to overclock the speed. I've found to be a good overclocker. ivybridge-overclocked: really? i'll check it out, thanks. just because the game stutters at stock, it doesn't mean there's no performance overclockable for the cpu Did you try opening -benchmark-cpunotbenchmark? It's reported to be very accurate. If not sure, install the EULER-Benchmark-Plugin and use -privatescan. Sucks for you ivybridge-overclocked. You'll need to grab a Precision X so that you can use iNvidia GPU tuning v1.0. You may have to use Amazon affiliate links to let me see your preformance stats. The link is at the bottom of this post. ivybridge-overclocked: yeah, that's the best option i think ivybridge-overclocked: cool i'm all set, thanks
