PDS OST Converter Tool is a powerful OST to PST converter software that supports all Windows operating systems. It can convert any o365.ost files (contacts, calendar, email, notes, todo items and tasks) to other formats. It also supports all versions of Outlook, like 2013, 2016, 2010, 2007, 2003, 2002, 2000, and most of Exchange Server.1. Field of the Invention The present invention relates to a recording apparatus in which a recording head is moved in a width direction of a recording medium and a plurality of recording elements are used, in particular a recording apparatus in which a plurality of recording elements (e.g., heat-generating resistors or heat-generating elements) are used for each color. 2. Description of the Related Art In an inkjet recording apparatus in which a plurality of recording elements are used for each color, ink is supplied from an ink tank via a flow path. When ink reaches a heater in the recording head, the ink is converted to bubbles and is ejected from nozzles. The nozzle has a diameter of about 20 µm, and the nozzle is easily clogged with dust. Japanese Patent No. 3542577 proposes a recording apparatus including a plurality of (about four) recording elements arranged for each color. An ink ejection amount is increased and an ink ejection speed is increased by ejecting inks supplied from each ink tank from different nozzles. However, when the ink is ejected from the same nozzle, the ink may be stopped at an ink channel. In order to solve the above problems, Japanese Patent Application Laid-Open No. 08-174722 proposes an apparatus which detects an ink ejection state from a power supply voltage. When there is ink ejection, a heating element on a head for ejecting ink is overheated to raise the temperature of the heating element. The apparatus detects the heating element temperature and the power supply voltage. In the above apparatus, when the power supply voltage is raised above a specified value, the apparatus assumes that ink is ejected from the heating element. When the heating element temperature is raised, a current supplied from a power supply is reduced, thereby reducing the power supply voltage. However, when the power supply voltage is changed before the heating element temperature becomes higher than a specified value, it is difficult to detect that ink is ejected at a correct position.Q: How to find the PID by retrieving its executable path?
