The addition of HyperMotion Technology brings FIFA back to its roots. In the original game, players were able to use techniques to more easily move around the pitch, as well as maneuvering the ball. This much more realistic system will make a return in FIFA 22 as players have to fight for control of the ball in the air – something they’ve been missing since the PS2 and Xbox – and additionally, make better use of the unpredictability that comes with live, in-game physics. Players also have more control over the ball, especially when the ball rolls out of play. Whether they’re controlling a defender’s pace or simply swerving it away from an onrushing opponent, players will feel that they have more control over a ball under pressure when their skills and instincts have been honed in the game’s full-bore one-on-one and one-on-two matches. As far as the other new features are concerned, FIFA 22 will also give players the option to play as a goalkeeper. Alongside the familiar controls, players will have the ability to see which player is the ball’s next intended target in order to best position themselves in order to execute an accurate and confident save. Another new feature is “Exclusive Player Chemistry” – a feature that has been a long requested and deserved addition. It is based on the idea of “play style” and is aimed at creating a cohesive and consistent feel to the team dynamics in FIFA. As the name suggests, the chemistry starts from the basic principles of the player’s style, such as the preferred positioning and playing style, while recognising that this is a dynamic, evolving system that can be adjusted as the campaign progresses. There will also be a large number of new stadiums, with more than 40 of them real-life matches featuring and six more in the game’s official expansion packs. The UEFA Pro Clubs and the UEFA Champions League will also both feature in the game, with the first competition seeing the return of Alex Hunter, who designed last year’s competition. The sides will each have their own ground and the clubs will be backed by their respective national teams. “I feel that the football we all love has changed in a fundamental way,” said Greg Dykes, executive vice president and general manager of EA Sports. “We know the FIFA games have been very important over the years and so we are delighted to bring these most

Football (also known as soccer outside of North America and the United Kingdom) is the most widely-played sport in the world, bringing together millions of passionate fans around the globe. Each year, more people play football than any other sport. Where is FIFA created? FIFA is developed in Paris, France, by EA Canada and EA Munich. How it is played? Each season of FIFA takes place over the course of one calendar year and one or more official FIFA international championships. A game of FIFA is played between two teams of 11 players. How does the game work? The basic mechanics of FIFA are as follows: CAMERAS CAMERAS are the backbone of FIFA gameplay. The cameras in the real game allow you to aim accurately, and pull off cool moves. Kick off Your team takes to the pitch and makes a final warm-up to collect itself before kick off. Passing and shooting The five players on your team take up their positions – the ball is passed to one of them. The first player to touch the ball – either with a pass or a shot – is the player with the ball. The player with the ball can now either pass or shoot – or dribble – in order to create space for himself or to set up an attack. Passing and dribbling If a player has the ball and wants to pass to another player, he can also carry the ball by sliding it with his left foot. In addition to sliding, the player can perform ‘pivots’, backwards and forwards, in order to dribble around defenders. The player then passes the ball, trying to find the exact same space that he used for his first pass. As a result, the defender may be forced to either chase the ball or leave his original position. Shooting If a player has the ball but wants to shoot, he can either pass it to another player (an accurate shot is often called a ‘weighted pass’), or the player can dribble past a defender and shoot. The shooter may be fouled if he shoots while dribbling past a defender. Skipping/shuffling A player can also kick the ball to move it a few metres forward or backwards. Misc Goalkeepers can ‘kick’ the ball to kick off (but bc9d6d6daa
