AutoLISP is a programming language embedded in AutoCAD that enables users to extend AutoCAD features. As well as providing an external programming interface, AutoLISP offers a development toolkit, allowing the creation of plugins. Developers can create language and custom tools for use in AutoCAD or other AutoCAD-compatible software. AutoLISP can be used for all types of programming including standalone applications, plug-ins, and interactive dialogs. Visual LISP (VLISP) is a scripting language embedded in AutoCAD that allows users to perform visual or text operations on layers, blocks, and other drawings in AutoCAD. VLISP is a high-level programming language, providing fast development. VLISP scripts can be dynamically linked to any AutoCAD command

and run directly in AutoCAD. VLISP scripts can interact with AutoCAD commands using a visual programming environment or via the command line. Visual Basic for Applications (VBA) is a proprietary programming language for use in Microsoft Office applications. It allows developers to write applications and macros for Office documents. VBA is essentially a macro-driven programming language for use in Microsoft Office-compatible applications. It uses object-oriented programming techniques, dynamic linking and the Microsoft Component Object Model (COM) interface. Visual Basic is part of the Microsoft Visual Studio package, and is included with Microsoft Office. Visual Basic is also the name of a variant of the Basic programming language. .NET Framework is a collection of related technologies for building software, including programming languages, software development tools, and runtime environments for the common programming tasks. The frameworks are designed to interoperate in ways that allow multiple tools to interact within a single process or across a network. The frameworks include Microsoft.NET, a set of programming tools, languages and runtimes for building web, desktop, mobile, and server applications. The development of the framework involves collaboration across the Windows and Visual C++ teams. ObjectARX is a C++ library that provides object-oriented features to AutoCAD. ObjectARX supports automatic memory management. An object is defined by its data members and methods. Semiconductor devices are a vital part of modern industry. Semiconductor devices are used in various applications, such as, for example, in the automotive industry, in satellite communications, and in consumer electronics. Semiconductor devices are fabricated using a variety of processing steps. One processing step may include a step of depositing a material on a semiconductor substrate. For example, a conductive layer may be deposited on a semiconductor substrate. The conductive layer may include one or more materials. However, as semiconductor devices are scaled down to provide a smaller footprint, a number of challenges are presented. One such challenge is the difficulty of providing contact between the conductive layer and the semiconductor substrate. For example, as semiconductor devices are scaled down, the separation distance between the conductive layer and the semiconductor substrate is reduced. Accordingly, various processes and structures have been developed to enable the conductive layer to be in electrical contact
