Doing the build up himself, there was only one problem with the engine. He could not find the intake and exhaust valves. Trying to figure out just where the valves are located he had to work the entire engine down to the lowest possible millimeter scale. He figured that the valves would be attached to the head at the lowest point on the head. He used a fine tipped dremel to drill out a small hole and locate the areas where the valves are located.. He found the valves but only after doing the build up himself. In making the tail gate he used some old steel that was lying around the shop that was suitable for the job. He started by making a frame using steel tubing he had cut to the size and shape needed. He then attached the rear quarter-panels to the frame. In doing so he discovered that one panel had a dent in it and had to be replaced. It wasn't a long job but it took more time than he expected. After that he then cut up two of the rear seatbelts and made covers to hold the seatbelts in place. On the sides he created a metal flange to hold the seatbelts to the frame, side panels and door panels. One panel was cut c6a93da74d
