Keymacro is a keyboard macro recorder and editor, that works as an interface between your keyboard and computer. From here you can record keystroke commands, perform repetitive tasks, launch an application and even automate certain actions. You can configure Keymacro as a keyboard driver or a

keyboard extender. Once the macros are saved, a file is created in a.kkm file extension format, that can be managed by the user or saved to the computer and shared with other users or groups. Keymacro comes with a comprehensive keystroke, command and functionality editor that allows you to write and edit keyboard macro commands with a simple to use graphical interface, that lets you record and store a set of keyboard shortcut commands in a file for later recall.
