Can an electron be bounded by only one molecule? If yes, then is it a one-electron molecule? If no, then what is its relationship with covalent bond? A: An electron is an entity that is best defined at the molecular level. As a wavefunction, an electron is extended over the entire molecule. However, at the position of an electron (and in classical physics, it's the position that matters), an electron exists at a single point and has a fixed (hence, non-extended) "volume". In classical terms, it's called the probability of finding the electron at that point. The electron is said to be "bounded" by the nucleus of the atom at this point. The electron can be bounded by a single atom or a single molecule. In fact, the electron of an atom is bounded by the atomic orbitals of the atoms comprising the molecule. On the other hand, the energy and wavefunction of an electron is defined at the quantum level and have to be expressed as
