To develop a protocol for engaging stakeholders in research funding opportunities. We report our institutional experience of developing a protocol and its first application. After each round of funding for a particular disease research project, we identify the research project which the participants of the funding institution find most useful, and invite the participants to participate in a second funding cycle.

About Us Compare prices on English Grammar Book at Shopsimal.com - use promo codes and coupons for best offers and deals. We work hard to get you amazing deals and collect all available offers online and represent it in one place for the customers. Now our visitors can leverage benefits of big brands and heavy discounts available for that day and for what services to purchase. Start smart buying with Shopsimal.com right now and choose your golden price on every purchase.

Q: Apply multiple functions to multiple lists in a list of lists I'm not sure how to phrase this, but the question is self-explanatory: I have a list of lists like this: A = [[1,2,3], [4,5,6], [7,8,9]] I then have a list of lists of lists: B = [[[1,2],[3,4],[5,6]], [[1,2,3],[3,4,5],[5,6,7]]] I want to apply a function "f" to each list in list "A", so that I end up with a single list of lists: A = [[f(x),f(y),f(z)],[f(x),f(y),f(z)],[f(x),f(y),f(z)]] How can I do this? A: A = [[1,2,3], [4,5,6], [7,8,9]] B = [[[1,2],[3,4],[5,6]], [[1,2,3],[3,4,5],[5,6,7]]] The following code does what you want:

```
import operator
A = [[[1,2,3], [4,5,6], [7,8,9]], [[[1,2],[3,4],[5,6]], [[1,2,3],[3,4,5],[5,6,7]]]]
list(map(operator.tuple, A)) # [(1, 2, 3), (4, 5, 6), (7, 8, 9)], [(1, 2, 3), (4, 5, 6), (7, 8, 9)]
```
