Sarcopenia and sarcopenic obesity are both linked to increased risk of osteoporosis and cardiovascular disease (CVD). Our aim was to investigate the value of bioelectrical impedance vector analysis (BIVA) in discriminating sarcopenic obesity from nonobese obesity. The present study was carried out with a cross-sectional design. The study population consisted of 103 women (age range: 18-88 years) divided into three groups: control (n = 30), sarcopenic obesity (n = 33) and nonobese obesity (n = 40). BIVA was measured by body composition analyzer (TBF-300GS). Sarcopenia was defined according to the criteria proposed by the European Working Group on Sarcopenia in Older People. BIVA identified the three groups as having significant differences in whole-body fat distribution, fat-free mass index, leg-to-leg fat mass ratio, phase angle, and phase angle index. The group with sarcopenic obesity had significantly higher BMI and body weight than the other groups, while there were no significant differences in the fasting blood glucose, lipid profile and blood pressure. BIVA is a useful method for evaluating whole-body fat distribution. BIVA-measured phase angle is significantly lower and leg-to-leg fat mass ratio is significantly higher in sarcopenic obesity than in the other groups. The BIVA-measured phase angle may be a useful index to discriminate between sarcopenic obesity and nonobese obesity.Q: iOS8 and Xcode6 throws Terminating app due to uncaught exception 'NSInternalInconsistencyException', reason: '-[UIImage imageWithData:]: unrecognized selector sent to instance 0x17001f680 I have the following line of code UIImage* image = [UIImage imageWithData:[NSData dataWithContentsOfFile:[[NSBundle mainBundle] pathForResource:@"sources/logo" ofType:@"png"]]]; f988f36e3a
