PLUS

KEYMACRO allows you to remap your keyboard

shortcuts. The default settings are arranged in a "powerup-like" order. You can re-arrange the keys in the "keyboard preferences" menu. You can also make a list of keys that you want to have remapped and load that list into KEYMACRO. CHALLENGE Package: Challenge is a program that is written in Java. It is a platform game with over 100 different levels that are generated by defining a space and the rules that govern the game. CHALLENGE uses keymapping to allow users to use different keyboard layouts, and to switch between layouts. Source: INSTALLATION Download the "linux.zip" package and unzip it. The package contains a file called "INSTALL". Double click on this file to launch the installation. GRAPHICAL USER INTERFACE In the main window that appears when you double-click the INSTALL file, click on the bottom left button (red arrow), labelled "Open Folder". This will launch the "KEYMACRO" folder into the "Applications" menu. Click on the "KEYMACRO" application. The main window should now look like the one below. The main screen will look like this: The commands that you can execute are at the bottom of the screen. The Keymapping screen will look like this: GRAPHICAL USER INTERFACE You can open the menu by pressing the F1 key. The menu contains: NEW List File ADD Key Remapping - Remapping - Delete All ... Open Folder About Shortcuts and

Switches Help The first thing you need to do is open a list file. To open a list file, select the name of the file that contains the list file in the listbox in the Keymapping screen, and press the F2 key. The listbox will automatically update to show that a list file has been found. Click on the "New" button to launch the New List File screen. The New List File screen will look like this: The available list file options are: - Names - This is the name that you want to give to the list file. The names can contain any characters, but the name of the list file is case-sensitive. - Selection - This defines whether the list 2edc1e01e8
