I am addicted to photoshop. I love it. I am addicted to the new features coming out. I like the new button layout. I like the changes they've made. I like the new features the program has. The new features are great. Easier selection of layers with some slick UI features. Better quality sharpening tools. Less clutter in the preference menu. But still have no idea how some of the new features work. I guess I'll have to get use to it all. You can commit it to automation. Guy level. Guy maybe a pro. Guy never has to think about it ever again. A real breakthrough. A real major step forward. A big win. I love it. Love it. Please get on board. Guy buys a lot of stuff. New from my favorite company. Love. Love. Love. Love you. Love you guys. Love you Max. Love you guys. Love you photoshop. Love you guys. Breast stroke every feature changing hand. Love you Max. Love you guys. Love you. Love you. Love you. Love you. Love you. Love you. Love you. Love you. Love you. Love you. Love you.

Great job Lightroom! I love the upgrade, the new features, new features, new features. The new features have all kinda meh. I use the development engine pretty much however. I don't use the artistic or creative engine so much unless I want to use a feature that I haven't seen before. I tend to live in the metadata area and if it is an automated thing it becomes more or less invisible to me. The 2 new additions are huge. The use of the lossless J-peg as a preview of it's locked down version seems to be a benefit. However, some of the new tools in the dev engine still seem to have issues. But the dev engine is still an "extra" tool today. Some of the snapshot tools are still slow compared to the shortcut window. The cropping tool seems to do a good job on the straight portrait images I saw. The window is still fussy about border line though. It is a mixed bag however. It is a real bonus when the program is updated and forces a pop out of the fan boy crew of the bandwagon. The first one to buy gets a piece of the action. Love you Max. Love you guys. Love you. Love you. Love you. Love you.

Adobe Photoshop Elements 2023 has been designed to make it easier to make your photos look great. So, for example, you'll be able to easily add a new Photo Style using the AUTO style as your wrapper. You can with ease apply those settings to all images in a project. There's also a new user interface that makes the editing workflow even easier to follow. This year too, Adobe has announced the next generation of its AI technology, called Sensei. Every time you make a change to an image, Adobe Sensei makes suggestions for improving that sections of your photos, including the ability to sift through mountain ranges of an image to help you make the most of the object. It also searches and adds more than 23 million Adobe Stock photos to your project. With the new UI design, you can now also transform your photos hands-free using the Filters menu. To access the Filters, tools and effects, simply click the Magic Wand tool in the toolbar. You can choose from a number of adjustment and style controls. With those you can easily control the edges and shading of a photo, add effects, change the tonal range of the image, add a vintage or quirky edge to the image and more. The biggest addition to Adobe Photoshop Elements for 2021 is that the program will now display the RAW format directly in the editor. It's much faster than converting the photos to another format and you also get the option to save the RAW version as a copy directly to the drive. It doesn't have to download the RAW version before it can do this.
