If you like the idea of working on beautiful pictures, a perfect stop for you will be Holland Creative , who I'm reviewing in this article. The brand should be familiar for its reputation and for a reason: their royalty free images, vectors and freebies will become your friends and with them, all sorts of design projects will open up for you. This is a free stock library, with downloads and licenses for Creative Cloud on the desktop.

It incorporates many features designed to save you time and improve your workflow. For example, Photoshop has new features for creating layers (clipping or masking a section of an image to reveal), designing graphic elements with the shape tool, creating and editing vector paths, and ray tracing. It also features an integrated tool that lets you crop an image to just the area you want. The integrated History panel lets you use actions and adjustments to save repeated steps. Photoshop Elements 2021 comes with 8 GB of free storage (up from 4 GB in Photoshop Elements 2020). There are several other features that can make features more efficient. For example, the Lens Correction options include the ability to sync photo stacks across devices. This feature lets you use your favorite images from various devices as you edit other images.

Adjustments, such as the levels adjustments or the color temperature/brightness settings, have a few features that are confusing and not easy to understand. Photoshop Elements comes with an automatic adjustment, called auto levels, that does what it should for most images. However, if I used an image from another program, I would have to manually adjust the histogram to do the same. It has an automatic feature called auto blacks that is not as good as my own method for this selection. The Auto Contrast and Auto Contrast-A also do not seem to know what I want to do. If I have images that I shot “living room” at a certain setting, I have to select all of those images and then adjust the correction slider for all of them. This could be automated into a settings of one or two. With the Lens Correction options, such as Auto Smart Fix, it’s easy to remove red-eye and other artifacts, as well as fix images that have lens distortions or camera shake. It offers an automatic feature to segment out a foreground object. However, this feature was not very good. The program recognized objects poorly in some of my test images. ( I found it better in recent notes and images taken with the old phone with a resolution of 1324×848 as my camera. Some parts of the image viewed well with the adjustment in this newer phone, while some parts did not. )

There are three ways to blend textures: **Normal:** The Normal blend puts the underlying image beneath the color in a variety of ways and creates a variety of effects. **Screen:** The Screen blend puts the underlying image underneath the color in a variety of ways and creates a variety of effects.

The Photoshop blend filters aim to enhance artwork's colors, textures, and patterns. They produce various types of effects that are difficult to replicate with any other tool in the Free version of Photoshop.

The Brighten blend filter makes images brighter by adding light. The Lighten blend filter makes images brighter by subtracting light. The Darken blend filter makes images darker by subtracting light. The Color burn blend filter gives images a reddish cast by reducing color saturation and lightening the shadows. The Color Dodge blend filter gives images a violet cast by increasing color saturation and darkening the shadows. The Linear Dodge blend filter puts the darkest areas of an image in front while lightening the rest. The Vivid Light blend filter lightens dark areas and brightens bright areas. The Saturate blend filter increases saturation.

There are 3 ways to sharpening which allows you to get a more detailed look on your images. **Unsharp Mask:** The Unsharp Blending mode sharpens sharp edges in the image, while keeping the details of the original image intact.

Select the color you want to use and click **Erase**. Find the corner of the selection tool (the green arrow icon shown here). Once you've identified the corner to erase, right-click to open the menu and select **E** to erase the area.
