If you are looking for editing tools then you'd be glad to know that Adobe has you covered with the selection tool that allows you to select all or a portion by drawing a box around what you want. When you use the selection tool you are just manipulating pixels, but it doesn't have to be hard. It's the quickest way to navigate through your images and adjust things so you can get the end result you want. Every time you use the selection tool you're changing the positioning of pixel, so you must be careful to not make a wrong selection or let your artistic vision take over. You don't necessarily have to make any selections at all to create an image from scratch. Just find a spot that you want the image to begin and then start painting. Paint with a soft brush or brushless tablet using filtered paper or even a white piece of cardboard. Don't try to imitate anything but be creative with what you're creating and it will turn out perfectly.
