It's been another fantastic show, with more amazing new hardware, software, and services than ever before. I broke my NAB tradition of leaving the event early to spend more time making videos with my new Google Glass (I was the first person at NAB to do a Google Glass live stream), so this was the first time I skipped a CES show.

I've been looking forward to the launch of the \$3,000 Surface Studio since the day it was announced, and it's really cool. In fact, I think the largest Microsoft innovation of the show was not one of the 14 new laptops, tablets, and devices that Microsoft showed, but the Surface Studio. It's truly an innovation in design, the latest in a long line of masterful Microsoft design and engineering.

Yes, I'm biased. While I don't know why anyone would buy three separate devices, or how a Surface Studio, with its 1TB of solid-state storage, is any better (or more affordable) for corporate users than a laptop with the same capacity, I'm a big fan. When you consider how much I value the training and support I receive from my corporate Adobe Account Manager, the Surface Studio is an absolute no-brainer.

And all of these innovations are happening at the same time that the Apple creative community is harking back to the promise of the digital era of art. What a great time to be in the design industry.

In fact, my more measured view of just how revolutionary Microsoft's Surface Studio is compared to the new MacBook Pro is that the most important design and design principles of the time — that is, the rules for how we make things — were always about being willing to break the rules. If we can't do that now, maybe we're already in trouble.

Products like Adobe Photoshop CC, Microsoft Office 365, and Sketch, and other design software, seem to offer more powerful features, but their desktop-based nature can put off users looking for something that functions more like a web service. Pixlr, on the other hand, offers a number of tools that essentially emulate the Photoshop functions that more online services lack. For instance, like Photoshop, you can perform powerful selections, edit and remove unwanted items, and composite individual images together into a single file. If budget is your main concern, a Mac or Windows PC can be purchased for as little as \$9 a month and offers a much greater canvas to work on than online services. If you have a solid photography background, Photoshop is also a great option for you. The program, which comes in a variety of editions, particularly its desktop version, is a great, powerful tool used by photographers around the world. Its features are robust, allowing even the most pixel-happy enthusiast to create custom digital output, and its workflow at its best. Los Angeles, CA – October 27, 2017 --(BUSINESS WIRE)-- The competition between online services and desktop applications for control of new, creative users is intense and increasing, and Adobe® (Nasdaq:ADBE) believes it has a winning portfolio combined with strong long-term customer relationships to take advantage of this shift toward desktop-based applications. “We’re well-positioned in the market today,” said John Loiacono, senior vice president of product management at Adobe. “We have a diverse set of solutions in the market, which enables us to continue to innovate, deliver relevant, compelling experiences, and create long-term relationships with our customers.”

Beyond the four main, primary functions of Photoshop, there are many more tools, options, and features that come attached with the software. Adobe Photoshop Elements enables you to use all of these features but at a much lower cost. The features on Photoshop will be enabled whether you use a Mac or PC. There are some limitations, however, depending on your computer's system version. There are some features that are only available on Photoshop for a desktop version; these are:

- Spot selection (paint bucket selection).
- Content-aware fill (see next video).
- Hyper-realistic skin smoothing (see next video).
- Simulated chalk art, drawn on canvas, and photo painting.
- All new filter plug-ins.

Other highlights include:

- Dark Shadows, which generates a realistic-looking shadow on an image.
- HDR Merge, which composes two bracketed images to create a high-dynamic range image.
- Texture Swap, which fills the pores of a face with a photo.
- Make Brightness and Contrast, which increases or decreases the light in a picture—the whitewashed effect is especially fun!
- New 8K and 32D Render Presets.

A number of new features are available in the Adobe Labs section of the software, too. There are a range of new tools available, such as:

- Photomatrix, a photo optimization tool.
- Smart Sharpen, which sharpens an image while removing noise and blurring.
- Convert Logo, which enables you to convert a PDF graphic to Adobe Illustrator or SVG format.
- New Stylize > Vintage > Etching, which lets you create a photo with an etched look.
