Last year's release of Photoshop Creative Cloud was a huge success and has increased Adobe's revenue in the past year. This year, the company wants to harness the popularity of its cloud services to drive more professional photographers and videographers to the cloud. Adobe has introduced a new subscription plan called Creative Cloud 1 Year Access on Demand. This new subscription plan offers a 12-month on-demand access to Adobe Creative Cloud and Flash Professional that runs in the cloud. Other features of the subscription include storage options such as content by itself on mobile devices as well as hosting on the cloud. The technology quality at the cloud has been upgraded to the new CC4, which is twice as fast as the previous cut and save process. The new storage options also allow for additional files such as graphics and videos. Possibly one of the most mind-blowing new features from Photoshop for the year ahead is the introduction of Neural Filters. It's actually a new workspace within Photoshop with filters powered by Adobe Sensei. Users on either the Windows or Mac platforms can access the software by downloading it from the Adobe website. Alternatively, you can download Photoshop Elements from the same site, but for a smaller price tag and without the additional features. Automatic image repair - click an area of an image and Photoshop Elements automatically detects and eliminates things like a pixel that looks crushed or a scratch that looks like a hole in the picture.

Layer Comps:Layers can be compared and contrasted with other layers and the whole canvas. You can use the Layer Comps command for finding similarities and differences, enhancing the quality of your images. Adobe Photoshop is a graphic design, photo editing, and illustration software that is used since the 1990s. Photoshop is developed by Adobe Systems (<http://www.adobe.com/>). It can be used for creating, editing, and enhancing digital images. Photoshop enables a user to adjust colors, add text, create graphics, and apply special effects such as blurs, reflection, and halos. Free versions have fewer effects and less features than a full version. The basics can be free for personal, noncommercial use, but upgrading to a full version must be purchased. A full version costs \$399 and can be installed on up to three devices. Adobe Presenter for web does this with a combination of HTML page creation, image and audio presentation, custom animation, and other interactive features. Resolve understands and responds to voice commands in Microsoft Office Communicator for Mac. Resolve add-ins are a 1 to 1 mapping to Presenter add-ins, including references to the same Presenter item templates. Resolve is a fast presentation tool that can combine and animate 3D images with 2D animations. However, a 90-day evaluation is included, and it has to be purchased. Adobe Illustrator CC allows you to create art in vector-based shapes, paths and text. You can

customize built-in brushes, import Photoshop files and create more. The vector design tool comes bundled with Adobe XD. This step-by-step 'drag-and-drop' tool shares the same features as Adobe XD. It allows you to create and edit style sheets for your project, while sharing with other members. It is a very helpful tool, but not available for free. The software is available in the U.S. for \$ 100 and in Europe for € 100.

Over the last year, Adobe has introduced new features such as the Sidecar (beta), which lets Photoshop and Spark become one seamless workflow, by letting Photoshop share its opened files across applications that are installed on a Mac or PC (such as Lightroom and Pixelmator). The Sidecar (beta) is being integrated with new option updates in Photoshop and notifies users with a Mac or PC when their files are opened, and can be used to sync shared libraries or your Photos library across machines. Adobe added a new multi-monitor feature with a resizable workspace, which allows multiple screens to be joined together into a single editable workspace, called "Super Scribbles". Super Scribbles is also a timeline for layers and paths, so you can see the results of changes on multiple monitors at once. Just drag & drop or place multiple elements and instantly see the results. If you're a professional photographer currently using the Adobe Creative Cloud family of photography applications, you'll love using Lightroom CC for iPad with Lens Correction and Adobe Photoshop CC with Lens Correction. Simply connect your iPad to any of these applications, and the latest digital images instantly appear in Lightroom or Photoshop. This iOS workaround enables you to take photos directly and easily with your camera, and then edit, filter or correct them on your iPad using the most versatile selection tools, filters, and other features built into the latest-generation Adobe applications. When it's time to adjust or correct your photos, simply pair your iPad with your preferred application and correct the adjustment that you'd like to apply.
